CNN: Basics and Backprop

What is an image?

A visual representation

What is an image? : For a computer!

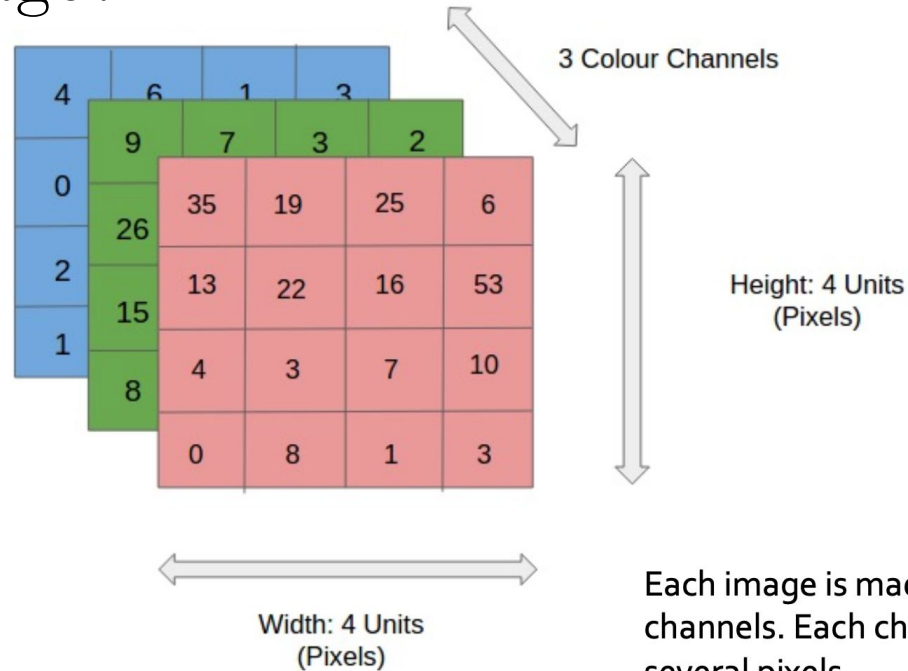

~~A visual representation.~~ A Matrix \mathbf{I} of dimensions (\mathbf{M}, \mathbf{N}) with $\mathbf{I}[\mathbf{i}][\mathbf{j}] = \text{intensity}(\text{pixel}(\mathbf{i}, \mathbf{j}))$

157	153	174	168	150	162	129	161	172	161	155	156

What is an image?

$I \rightarrow (3, M, N)$

$I[c][i][j] =$

Intensity at **pixel(i,j)** for channel **c**

Each image is made up of a set of channels. Each channel comprises of several pixels

3 for a colored image, 2 for B&W.

The number of channels you encounter could even increase!

$Z_{3,1}$	$Z_{3,2}$	$Z_{3,3}$

$$\text{Output Width} = \left[(W_{\text{in}} - W_k + 2P) // (S) \right] + 1$$

Same goes for Height.

Output Size

$A_{1,1}$	$A_{1,2}$	$A_{1,3}$	$A_{1,4}$
$A_{2,1}$	$A_{2,2}$	$A_{2,3}$	$A_{2,4}$
$A_{3,1}$	$A_{3,2}$	$A_{3,3}$	$A_{3,4}$
$A_{4,1}$	$A_{4,2}$	$A_{4,3}$	$A_{4,4}$

$Z_{1,1}$	$Z_{1,2}$	$Z_{1,3}$
$Z_{2,1}$	$Z_{2,2}$	$Z_{2,3}$
$Z_{3,1}$	$Z_{3,2}$	$Z_{3,3}$

$$\text{Output Width} = \left[\frac{(W_{\text{in}} - W_k + 2\mathbf{P})}{(\mathbf{S})} \right] + 1$$

P: Padding (here - 0)

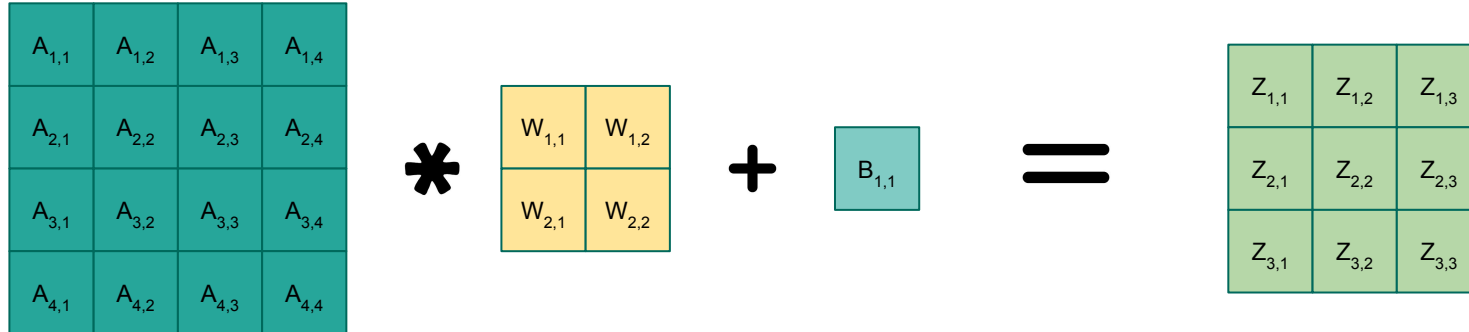

S: Stride (here - 1)

Stride

Taking bigger steps!

Stride = 1

What we did before - The kernel “moves” one pixel (or element) at a time.

Stride = 2

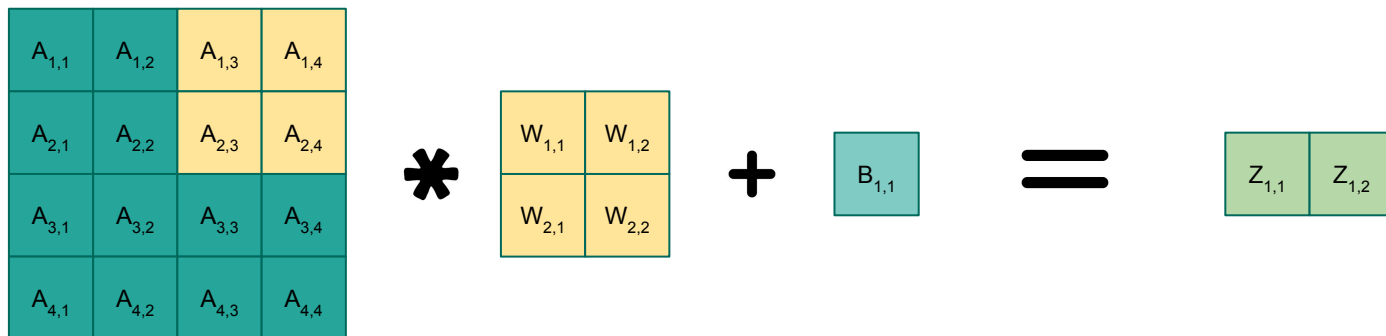

Start at the same place

$$Z_{1,1} = (A_{1,1} * W_{1,1}) + (A_{1,2} * W_{1,2}) + (A_{2,1} * W_{2,1}) + (A_{2,2} * W_{2,2}) + B$$

Stride = 2

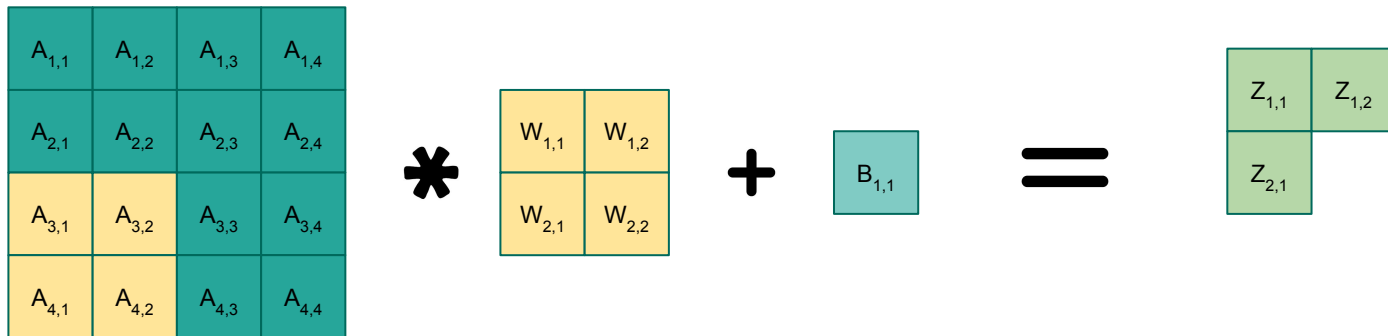

Move two elements to the right

$$Z_{1,2} = (A_{1,3} * W_{1,1}) + (A_{1,4} * W_{1,2}) + (A_{2,3} * W_{2,1}) + (A_{2,4} * W_{2,2}) + B$$

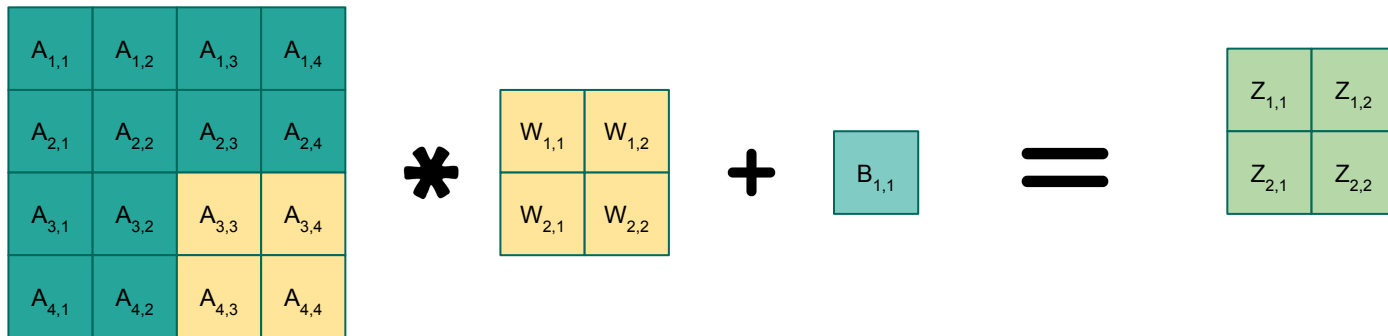

Stride = 2

Move two elements down.

Stride = 2

Move two elements to the right.

Interpreting Stride > 1

Think about how it is related to Upsampling(and Downsampling.

Will learn more in HW2

$$\begin{array}{c} \text{A} \\ \begin{bmatrix} 0 & 2 & -3 & 2 & -3 \\ -2 & -2 & -2 & -1 & -2 \\ -3 & -3 & 2 & -2 & 1 \\ -3 & -2 & 1 & -3 & 1 \\ 0 & -1 & 0 & 2 & -3 \end{bmatrix} \\ \text{Input Image} \\ 5 \times 5 \end{array} * \begin{array}{c} \text{W} \\ \begin{bmatrix} -1 & 0 & -2 \\ 1 & 1 & -1 \\ -1 & -1 & 0 \end{bmatrix} \\ \text{Kernel} \\ 3 \times 3 \end{array} + \begin{array}{c} \text{b} \\ \begin{bmatrix} -1 \end{bmatrix} \\ \text{Bias} \\ 1 \times 1 \end{array}$$

Multi-channel CNN

Multi-channel CNN

- Each kernel (or **filter**) has as many channels as the input does.

[kernel channels = Input channels]

- Channel **c** of the **kernel** convolves with channel **c** (corresponding) of the **input**.
- The number of output channels from the convolution = number of **filters**

Input

Kernel

3 maps

Add all maps

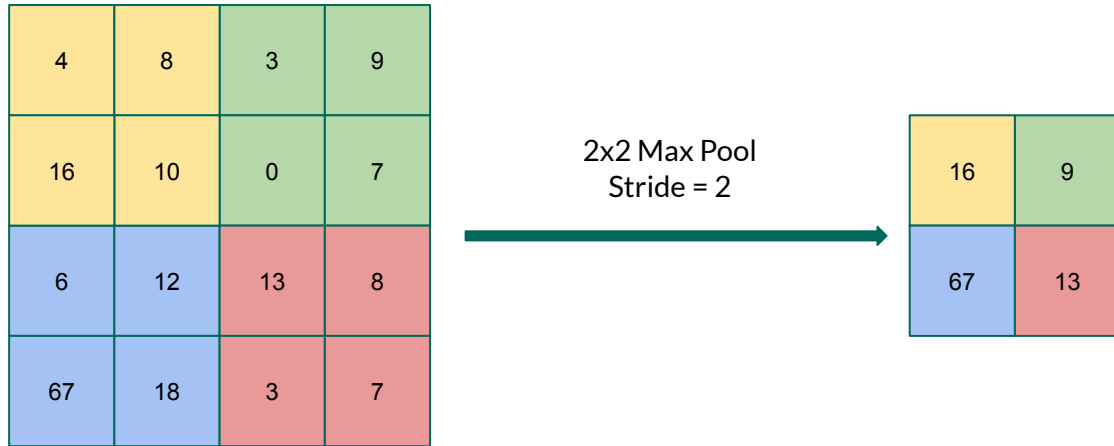

2 Filters with 3-channel input

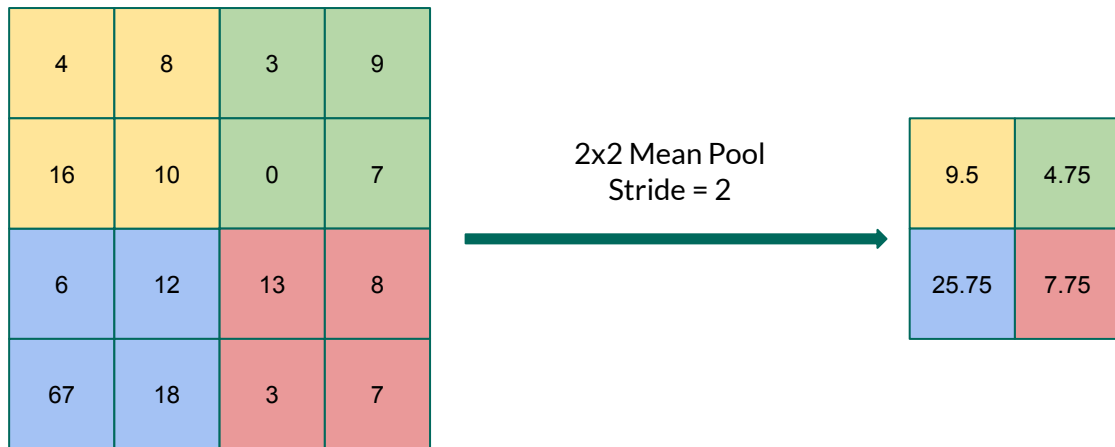

Pooling

- Usually follows convolutions
- Introduces Jitter Invariance
- Reduces feature-map size
- **Max, Mean, Min**
- **Pooling preserves number of channels**

Pooling

Pooling

Backpropagation: Chain Rule Refresher

Backpropagation: Chain Rule Refresher

$$f = q * z$$

$$\frac{\partial f}{\partial q} = z \mid z = -4$$

$$\frac{\partial f}{\partial z} = q \mid q = 3$$

$$q = x + y$$

$$\frac{\partial q}{\partial x} = 1 \quad \frac{\partial q}{\partial y} = 1$$

Backpropagation: Chain Rule Refresher

$$\frac{\partial q}{\partial x} = 1 \quad \frac{\partial q}{\partial y} = 1$$

$$\frac{\partial f}{\partial q} = -4$$

$$\frac{\partial f}{\partial x} = ?$$

$$\frac{\partial f}{\partial y} = ?$$

Using chain rule:

$$\frac{\partial f}{\partial x} = \frac{\partial f}{\partial q} * \frac{\partial q}{\partial x}$$

Backpropagation: Chain Rule Refresher

$$\frac{\partial f}{\partial x} = \frac{\partial f}{\partial q} * \frac{\partial q}{\partial x} = -4 * 1 = -4$$

$$\frac{\partial f}{\partial y} = \frac{\partial f}{\partial q} * \frac{\partial q}{\partial y} = -4 * 1 = -4$$

Backpropagation: Chain Rule in Convolutional Layer

Backpropagation: Chain Rule in Convolutional Layer

$\frac{\partial z}{\partial x}$ & $\frac{\partial z}{\partial y}$ are local gradients

$\frac{\partial L}{\partial z}$ is the loss from the previous layer which has to be backpropagated to other layers

Backpropagation: Chain Rule in Convolutional Layer

*This slide contains an animation, so it might not show up in the pdf file

Backpropagation: Chain Rule in Convolutional Layer

X_{11}	X_{12}	X_{13}
X_{21}	X_{22}	X_{23}
X_{31}	X_{32}	X_{33}

Input X

F_{11}	F_{12}
F_{21}	F_{22}

Filter F

$X_{11}F_{11}$	$X_{12}F_{12}$	X_{13}
$X_{21}F_{21}$	$X_{22}F_{22}$	X_{23}
X_{31}	X_{32}	X_{33}

$$O_{11} = X_{11}F_{11} + X_{12}F_{12} + X_{21}F_{21} + X_{22}F_{22}$$

$\frac{\partial O}{\partial X}$ & $\frac{\partial O}{\partial F}$ are local gradients

$\frac{\partial L}{\partial z}$ is the loss from the previous layer which has to be backpropagated to other layers

Backpropagation: Finding Gradients for X and F

Backpropagation: Finding $\partial L / \partial F$

Step 1: Finding the local gradient - $\partial O / \partial F$

$$O_{11} = X_{11}F_{11} + X_{12}F_{12} + X_{21}F_{21} + X_{22}F_{22}$$

Finding derivatives with respect to F_{11} , F_{12} , F_{21} and F_{22}

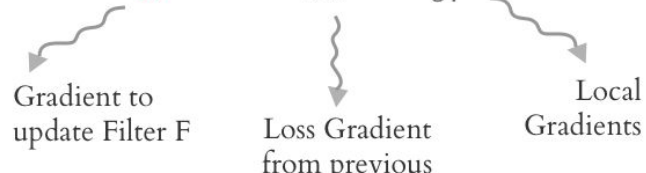

$$\frac{\partial O_{11}}{\partial F_{11}} = X_{11} \quad \frac{\partial O_{11}}{\partial F_{12}} = X_{12} \quad \frac{\partial O_{11}}{\partial F_{21}} = X_{21} \quad \frac{\partial O_{11}}{\partial F_{22}} = X_{22}$$

Similarly, we can find the local gradients for O_{12} , O_{21} and O_{22}

Backpropagation: Finding $\partial L / \partial F$

Step 2: Using the Chain rule

$$\frac{\partial L}{\partial F} = \frac{\partial L}{\partial O} * \frac{\partial O}{\partial F}$$

Gradient to update Filter F Loss Gradient from previous layer Local Gradients

For every element of F

$$\frac{\partial L}{\partial F_i} = \sum_{k=1}^M \frac{\partial L}{\partial O_k} * \frac{\partial O_k}{\partial F_i}$$

$$\frac{\partial L}{\partial F_{11}} = \frac{\partial L}{\partial O_{11}} * \frac{\partial O_{11}}{\partial F_{11}} + \frac{\partial L}{\partial O_{12}} * \frac{\partial O_{12}}{\partial F_{11}} + \frac{\partial L}{\partial O_{21}} * \frac{\partial O_{21}}{\partial F_{11}} + \frac{\partial L}{\partial O_{22}} * \frac{\partial O_{22}}{\partial F_{11}}$$

$$\frac{\partial L}{\partial F_{12}} = \frac{\partial L}{\partial O_{11}} * \frac{\partial O_{11}}{\partial F_{12}} + \frac{\partial L}{\partial O_{12}} * \frac{\partial O_{12}}{\partial F_{12}} + \frac{\partial L}{\partial O_{21}} * \frac{\partial O_{21}}{\partial F_{12}} + \frac{\partial L}{\partial O_{22}} * \frac{\partial O_{22}}{\partial F_{12}}$$

$$\frac{\partial L}{\partial F_{21}} = \frac{\partial L}{\partial O_{11}} * \frac{\partial O_{11}}{\partial F_{21}} + \frac{\partial L}{\partial O_{12}} * \frac{\partial O_{12}}{\partial F_{21}} + \frac{\partial L}{\partial O_{21}} * \frac{\partial O_{21}}{\partial F_{21}} + \frac{\partial L}{\partial O_{22}} * \frac{\partial O_{22}}{\partial F_{21}}$$

$$\frac{\partial L}{\partial F_{22}} = \frac{\partial L}{\partial O_{11}} * \frac{\partial O_{11}}{\partial F_{22}} + \frac{\partial L}{\partial O_{12}} * \frac{\partial O_{12}}{\partial F_{22}} + \frac{\partial L}{\partial O_{21}} * \frac{\partial O_{21}}{\partial F_{22}} + \frac{\partial L}{\partial O_{22}} * \frac{\partial O_{22}}{\partial F_{22}}$$

Backpropagation: Finding $\partial L / \partial F$

Step 2: Using the Chain rule

$$\frac{\partial L}{\partial F} = \frac{\partial L}{\partial O} * \frac{\partial O}{\partial F}$$

Diagram illustrating the chain rule for finding the gradient of the loss with respect to the filter F . The equation shows the gradient $\frac{\partial L}{\partial F}$ (labeled "Gradient to update Filter F") is equal to the product of the loss gradient from the previous layer $\frac{\partial L}{\partial O}$ (labeled "Loss Gradient from previous layer") and the local gradients $\frac{\partial O}{\partial F}$ (labeled "Local Gradients").

For every element of F

$$\frac{\partial L}{\partial F_i} = \sum_{k=1}^M \frac{\partial L}{\partial O_k} * \frac{\partial O_k}{\partial F_i}$$

$$\frac{\partial L}{\partial F_{11}} = \frac{\partial L}{\partial O_{11}} * X_{11} + \frac{\partial L}{\partial O_{12}} * X_{12} + \frac{\partial L}{\partial O_{21}} * X_{21} + \frac{\partial L}{\partial O_{22}} * X_{22}$$

$$\frac{\partial L}{\partial F_{12}} = \frac{\partial L}{\partial O_{11}} * X_{12} + \frac{\partial L}{\partial O_{12}} * X_{13} + \frac{\partial L}{\partial O_{21}} * X_{22} + \frac{\partial L}{\partial O_{22}} * X_{23}$$

$$\frac{\partial L}{\partial F_{21}} = \frac{\partial L}{\partial O_{11}} * X_{21} + \frac{\partial L}{\partial O_{12}} * X_{22} + \frac{\partial L}{\partial O_{21}} * X_{31} + \frac{\partial L}{\partial O_{22}} * X_{32}$$

$$\frac{\partial L}{\partial F_{22}} = \frac{\partial L}{\partial O_{11}} * X_{22} + \frac{\partial L}{\partial O_{12}} * X_{23} + \frac{\partial L}{\partial O_{21}} * X_{32} + \frac{\partial L}{\partial O_{22}} * X_{33}$$

Backpropagation: Finding $\partial L / \partial F$

$\partial L / \partial F$ is nothing but the convolution between Input X and Loss Gradient from the next layer $\partial L / \partial O$

$$\begin{array}{|c|c|} \hline \frac{\partial L}{\partial F_{11}} & \frac{\partial L}{\partial F_{12}} \\ \hline \frac{\partial L}{\partial F_{21}} & \frac{\partial L}{\partial F_{22}} \\ \hline \end{array} = \text{Convolution} \left(\begin{array}{|c|c|c|} \hline X_{11} & X_{12} & X_{13} \\ \hline X_{21} & X_{22} & X_{23} \\ \hline X_{31} & X_{32} & X_{33} \\ \hline \end{array}, \begin{array}{|c|c|} \hline \frac{\partial L}{\partial O_{11}} & \frac{\partial L}{\partial O_{12}} \\ \hline \frac{\partial L}{\partial O_{21}} & \frac{\partial L}{\partial O_{22}} \\ \hline \end{array} \right)$$

where

$$\begin{array}{|c|c|c|} \hline X_{11} & X_{12} & X_{13} \\ \hline X_{21} & X_{22} & X_{23} \\ \hline X_{31} & X_{32} & X_{33} \\ \hline \end{array} = \text{Input X} \quad \begin{array}{|c|c|} \hline \frac{\partial L}{\partial O_{11}} & \frac{\partial L}{\partial O_{12}} \\ \hline \frac{\partial L}{\partial O_{21}} & \frac{\partial L}{\partial O_{22}} \\ \hline \end{array} = \frac{\partial L}{\partial O} \text{ Loss gradient from previous layer}$$

Backpropagation: Finding $\partial L / \partial \mathbf{O}$

Step 1: Finding the local gradient - $\partial \mathbf{O} / \partial \mathbf{X}$

$$O_{11} = X_{11}F_{11} + X_{12}F_{12} + X_{21}F_{21} + X_{22}F_{22}$$

Differentiating with respect to X_{11}, X_{12}, X_{21} and X_{22}

$$\frac{\partial O_{11}}{\partial X_{11}} = F_{11} \quad \frac{\partial O_{11}}{\partial X_{12}} = F_{12} \quad \frac{\partial O_{11}}{\partial X_{21}} = F_{21} \quad \frac{\partial O_{11}}{\partial X_{22}} = F_{22}$$

Similarly, we can find local gradients for O_{12}, O_{21} and O_{22}

Backpropagation: Finding $\partial L / \partial \theta$

Step 2: Using the Chain rule

For every element of X_i

$$\frac{\partial L}{\partial X_i} = \sum_{k=1}^M \frac{\partial L}{\partial \theta_k} * \frac{\partial \theta_k}{\partial X_i}$$

$$\frac{\partial L}{\partial X_{11}} = \frac{\partial L}{\partial \theta_{11}} * F_{11}$$

$$\frac{\partial L}{\partial X_{12}} = \frac{\partial L}{\partial \theta_{11}} * F_{12} + \frac{\partial L}{\partial \theta_{12}} * F_{11}$$

$$\frac{\partial L}{\partial X_{13}} = \frac{\partial L}{\partial \theta_{12}} * F_{12}$$

$$\frac{\partial L}{\partial X_{21}} = \frac{\partial L}{\partial \theta_{11}} * F_{21} + \frac{\partial L}{\partial \theta_{21}} * F_{11}$$

$$\frac{\partial L}{\partial X_{22}} = \frac{\partial L}{\partial \theta_{11}} * F_{22} + \frac{\partial L}{\partial \theta_{12}} * F_{21} + \frac{\partial L}{\partial \theta_{21}} * F_{12} + \frac{\partial L}{\partial \theta_{22}} * F_{11}$$

$$\frac{\partial L}{\partial X_{23}} = \frac{\partial L}{\partial \theta_{12}} * F_{22} + \frac{\partial L}{\partial \theta_{22}} * F_{12}$$

$$\frac{\partial L}{\partial X_{31}} = \frac{\partial L}{\partial \theta_{21}} * F_{21}$$

$$\frac{\partial L}{\partial X_{32}} = \frac{\partial L}{\partial \theta_{21}} * F_{22} + \frac{\partial L}{\partial \theta_{22}} * F_{21}$$

$$\frac{\partial L}{\partial X_{33}} = \frac{\partial L}{\partial \theta_{22}} * F_{22}$$

Backpropagation: $\partial L / \partial X$ as a 'Full Convolution'

Step 1: Rotate the Filter \mathbf{F} by 180 degrees - flipping it first vertically and then horizontally

*This slide contains an animation, so it might not show up in the pdf file

Backpropagation: $\partial L / \partial X$ as a 'Full Convolution'

Step 2: Full convolution between flipped filter F and $\partial L / \partial O$

F_{22}	F_{21}
F_{12}	F_{11}

Filter F

$\frac{\partial L}{\partial O_{11}}$	$\frac{\partial L}{\partial O_{12}}$
$\frac{\partial L}{\partial O_{21}}$	$\frac{\partial L}{\partial O_{22}}$

Loss Gradient $\frac{\partial L}{\partial O}$

$$\frac{\partial L}{\partial X_{11}} = F_{11} * \frac{\partial L}{\partial O_{11}}$$

F_{22}	F_{21}	
F_{12}	$F_{11} \frac{\partial L}{\partial O_{11}}$	$\frac{\partial L}{\partial O_{12}}$
	$\frac{\partial L}{\partial O_{21}}$	$\frac{\partial L}{\partial O_{22}}$

$\frac{\partial L}{\partial X_{11}}$	$\frac{\partial L}{\partial X_{12}}$	$\frac{\partial L}{\partial X_{13}}$
$\frac{\partial L}{\partial X_{21}}$	$\frac{\partial L}{\partial X_{22}}$	$\frac{\partial L}{\partial X_{23}}$
$\frac{\partial L}{\partial X_{31}}$	$\frac{\partial L}{\partial X_{32}}$	$\frac{\partial L}{\partial X_{33}}$

$\frac{\partial L}{\partial X}$

$$= \text{Full Convolution} \left(\begin{array}{cc} F_{22} & F_{21} \\ F_{12} & F_{11} \end{array}, \begin{array}{cc} \frac{\partial L}{\partial O_{11}} & \frac{\partial L}{\partial O_{12}} \\ \frac{\partial L}{\partial O_{21}} & \frac{\partial L}{\partial O_{22}} \end{array} \right)$$

Filter F Loss Gradient $\frac{\partial L}{\partial O}$

Backpropagation: Conclusion

Backpropagation in a Convolutional Layer of a CNN

Finding the gradients:

$$\frac{\partial L}{\partial F} = \text{Convolution} \left(\text{Input } X, \text{ Loss gradient } \frac{\partial L}{\partial O} \right)$$

$$\frac{\partial L}{\partial X} = \text{Full Convolution} \left(\begin{array}{c} 180^\circ \text{ rotated} \\ \text{Filter } F \end{array}, \text{ Loss Gradient } \frac{\partial L}{\partial O} \right)$$
